

Adjusting for Life

Innate Expressions – Ian Shtulman, DC
Pathways #41, page 40

Talking Points

- ❖ A short, but powerful story of Sofia, a 2 month old baby, who experienced multiple seizures daily. After various medications and diagnostic tests, her parents were referred to a pediatric chiropractor. After just one adjustment, Sofia was nursing better, and within a few adjustments, was experiencing far few seizures. The stretches between seizures have extended and her medications have decreased significantly. What a beautiful story of the way chiropractic can help this family find a comprehensive treatment plan for this beautiful child!
